EUR-CL_(EPC): G07B011/11

ABSTRACT:

The imprint on the ticket is applied via a thermal transfer foil by a thermal print head. The foil and ticket are at rest and the print head moves above the foil whilst a press, roller moves beneath the ticket. Delivery (2) and take-up (3) spools in a housing (1) are connected via a transmission belt (4). The print head (6) and a pivoting arm (7) beneath it with a press, cylinder (8), and moved by an electromagnet (9), are mounted in an internal, pivoting housing unit (5) moved by an electric motor (11). ADVANTAGE - Ticket cancelling system has drastically reduced lifetime maintenance costs.
